BREAKATPOINT Command

[GstarCAD 2027](#) · [Command Reference](#)

Commands > B Command > BREAKATPOINT

Function Description:

Breaks the selected object into two objects at the specified point. This feature facilitates users to break lines at a single point through command input, script writing, and programming.

Valid objects include lines, arcs, and open polylines. Closed objects (such as circles) cannot be broken at a point.

Command Access:

Menu Item[?]/

Ribbon: Home Tab > Modify Panel > Break at Point

Toolbar: Modify > Break at Point

Command Line: BREAKATPOINT

Command Alias: /

Command Prompts:

Select object:

Specify break point:
