Create Blocks

[GstarCAD 2027](#) · [User Guide](#)

User Guide > Create and Modify Objects > Create and Use Blocks > Create Blocks

You can create blocks by selecting objects, specifying a name and base point. You can also create text information as attributes of blocks. You can define a block by BLOCK, insert a DWG/DXF file, copyclip and paste as Block, or binding an xref. After you define a block , then you can repeatedly insert block reference anywhere in the current drawing, and you can insert it in other drawings by "Design Center".

The base point is used as a reference for positioning the block when you insert it.
