Disassociate Compound Objects

[GstarCAD 2027](#) · [User Guide](#)

User Guide > Create and Modify Objects > Change Existing Objects > Modify Objects > Disassociate Compound Objects

Compound objects like polylines, dimensions, hatches or block references can be converted into individual elements.

Explode Dimensions and Hatches

When a dimension or a hatch is exploded, the dimension or hatch object will be replaced by individual objects like lines, text, points or 2D solids and all relevance will be lost.

Explode Polylines

When a polyline is exploded, the polyline object will be replaced by lines.

Explode Block References

When a block with attributes is exploded, only the attribute definitions will be retained, the attribute

values will be lost. Colors and linetypes of objects in exploded block references can change.

Explode External References

External References (xref), which are drawing files linked (or attached) to another drawings , can not be exploded.
