Draw Ellipses

[GstarCAD 2027](#) · [User Guide](#)

User Guide > Create and Modify Objects > Draw Geometric Objects > Draw Curved Objects > Draw Ellipses

You can draw an ellipse by using two axes to specify its length and width.

You can choose one of the following methods to draw an ellipse:

- Center (Specify center of ellipse, Specify endpoint of axis, Specify distance to other axis or [Rotation])
- Axis (Specify axis endpoint of ellipse, Specify other endpoint of axis, Specify distance to other axis or [Rotation])

If you turn on Isometric Snap in the "Drafting Settings" dialog box, ELLIPSE has new option: Isocircle. You can use ellipses to represent isometric circles to simulate 3D on isometric plane.
