Explode Block Definitions

[GstarCAD 2027](#) · [User Guide](#)

User Guide > Create and Modify Objects > Create and Use Blocks > Explode Block Definitions

The block reference can be exploded into its component objects, if you need to modify one or more objects within the block separately.

By selecting the Explode option in the "Insert" dialog box, you can automatically explode block references as you insert them.

When you explode a block with nested block, only the top-level block will be exploded, the nested block will not be exploded.

Even if all references of a block are exploded or deleted, the block definitions is still stored in the drawing and can be inserted.
