Work with Layers

[GstarCAD 2027](#) · [User Guide](#)

User Guide > Create and Modify Objects > Control the Properties of Objects > Work with Layers

You can organize and group drawing objects on Layers, which are like transparent overlays.

[Overview of Layers](#)

Information in a drawing can be grouped by function and linetype, color and other standards can be enforced with the use of Layers.

[Create and Name Layers](#)

A new layer can be created and named for each conceptual grouping.

[Change Layer Settings and Layer Properties](#)

A layer's name and any of its properties (color and linetype) can be changed any time and objects can be moved from one layer to another.

[Filter and Sort the List of Layers](#)

Layer names are listed in the Layer Properties Manager and you can use the name or any layer property to sort them within the list.

[Save and Restore Layer States](#)

Current layer settings can be saved as a layer state, the state can be changed and restored later.
