AUTOXLSTABLE

[GstarCAD 2027](#) · [Whats New](#)

Innovative Features > AutoXlsTable

The

AUTOXLSTABLE function can well realize the collaborative work between excel and CAD, and transfer the table creation and editing work from CAD to excel, so as to make full use of the powerful table processing ability of Excel. After completing the relevant operations of the table, the excel table can be imported into CAD, and the grid objects in CAD can be associated with the excel file. When the external excel file changes, the "table update" function can automatically update the table data in CAD. Using the selection management function in the AUTOXLSTABLE, you can easily manage the length, area and other attributes of objects in the selection. When these objects change, the statistical data will be updated automatically.
