BATPURGE

[GstarCAD 2027](#) · [Whats New](#)

Innovative Features > BATPURGE

This new function allows to batch purge the excess objects such as blocks, layers, line type, dimension style or text style on several DWG files. The BATPURGE command doesn't need to open files. It executes the command of purge directly, which makes it run with very high efficiency.

After the command is started, a dialog box will be displayed as shown in the picture below.

In this dialog box you can add, select, unselect, clear and start purging objects within DWG files.

Dialog Box Options

Files List

Lists the files to purge.

Add Files

Only files selected by the user are added to the current list.

Add Folder

Add all files in the directory specified by the user to the list.

Select All

Selects all files in the Files List.

Select None

Makes all files in the Files List unselected.

Delete

Removes the selected file from the Files List.

Clear

Removes all files in the Files List.

Regapps

Deletes the registered application (REGAPP data).

Zero geometry

Deletes geometry of zero length, including lines, arcs, circles, and polylines.

Empty text objects

Deletes mtext and text objects that contain only spaces without any text.

Orphaned data

Performs a drawing scan and removes obsolete DGN linestyle data when you open the Purge dialog box.

Start Purge

Starts to purge files.

Log

Creates a log file, which contains the result of the purge operation and other information.
