GstarCAD 2026 also adds the sequential preview function.

Users need to manually click on any one of the frame records to enter the preview, then press the space bar to enter the preview of the next frame record, and the frame highlighting will be displayed on the frame record currently being previewed, which is convenient for the users to confirm the frame record currently being previewed, and then press the space bar to exit from the preview state and return to the dialog box of checking and adjusting when you are previewing to the last frame record.
