Display optimization

[GstarCAD 2027](#) · [Whats New](#)

What's new in GstarCAD 2027 > Display optimization

The new version significantly improves overall GPU utilization and optimizes the interactive experience for various operations when hardware acceleration is enabled. In core scenarios such as drawing file opening, editing, and display, performance has been enhanced by 30% to 80%. Complex operations can see speed improvements exceeding 90%. Additionally, the smooth line display effect has been refined, delivering a smoother and more efficient drawing experience.

Note: The performance data above is based on a comparison between the 2027 version (with hardware acceleration enabled) and the 2026 version under equivalent testing conditions.

The display effect of smooth lines is now more refined and fluid (as shown in the following image).
