What's new in GstarCAD 2027 > Plot Preview Toolbar Upgraded to Modular Integrated Functional Panel

In this release, we have completed architectural optimization of the Plot Preview module, with a full upgrade of the legacy toolbar to a modular, integrated functional panel, panels can be freely dragged, the floating positions are controlled by the LOCKUI system variable with values 0, 2, and 8.

The panel supports both docked and floating modes, and is fully compliant with the platform's unified interaction specifications. This upgrade effectively streamlines the operation workflow, minimizes operational errors, and significantly boosts working efficiency in drawing and plotting scenarios.
