About Copying Properties Between Objects

[GstarCAD 2027](#) · [Command Reference](#)

With Match Properties some or all properties of one object can be copied to other objects.

Color, layer, linetype, linetype scale, lineweight, plot style, viewport property overrides and 3D thickness are some of the property types, which can be copied. All relevant properties of the first selected object will be copied the other objects by default. In the Setup option you can block the properties you

don't want to be copied. During the command, you can go for the "Property Settings" dialog box (Setup option) at any time.
