Control the Views

[GstarCAD 2027](#) · [Command Reference](#)

[Pan and Zoom](#)

You can pan a view to reposition it in the drawing area or zoom it to change its magnification.

[Save and Restore Views](#)

Once you saved specific views by name, you can restore them later to change their layout or plotting or when you need to refer to certain details.

[Specify 3D Views](#)

You can control the 3D navigation display, projection, and visualization tools.

[Display Multiple Views in Model Space](#)

To be able to see several views at the same time, you can split the drawing area of the Model tab into separate viewing areas. These viewing areas are called model space viewports and they can be saved as arrangements and reused later.
