Draw Splines

[GstarCAD 2027](#) · [Command Reference](#)

A Spline is a smooth curve, which passes through or near a given set of points. You can draw a spline by specifying series of points , start tangents and end tangents.

You can use two methods for creating splines:

- Create spline curves with the Spline option of PEDIT to smooth existing polylines created with PLINE.
- Create splines with SPLINE. Drawings containing splines use less memory and disk space than those containing spline-fit polylines of similar shape.
