Extend to Nested Objects

[GstarCAD 2027](#) · [Command Reference](#)

The BEXTEND command is used to extend objects such as line segment, arc, polyline or ray to a block. Objects would be extended to a block as close as possible if they cannot intersect with each other.

Command line prompts as follow:

Select objects or <select all>: Select one or more blocks and press ENTER

Select the object to Extend or Shift-select to Trim or [Edge/Fence/Crossing/Project]:

Select object(s) or enter an option and press ENTER
