GROUPDISPLAYMODE System Variable

[GstarCAD 2027](#) · [Command Reference](#)

Function Description:

The GROUPDISPLAYMODE system variable is used to control how grips are displayed when group selection is turned on and an object in a group is selected.

Type	Integer
Saved in	Registry
Initial value	2
Range	0,1,2

System Variable Value:

- 0: Displays grips on all objects in the selected group.
- 1: Displays a single grip at the center of the grouped objects.
- 2: Displays a bounding box around the grouped objects, and displays a single grip at the center.
