[GstarCAD 2027](#) · [Command Reference](#)

Modify the line width you specified, if what you specified is a line and our software will convert the line to Pline automatically and change the line width. This function is similar to the pedit function, we can use it as a shortcut version and it is very convenient for modifying the line width.

Operation Steps:

- 1.Start the command.
- 2.Select the line.
- 3.Enter a new line width value and here we input "2" for example.
- 4.Enter to finish and the effect will be as below.
