

SAVETIME System Variable — GstarCAD 2027

SAVETIME System Variable

[GstarCAD 2027](#) · [Command Reference](#)

Function Description:

The SAVETIME system variable is used to set automatically saved time interval by minutes.

Type	Integer
Saved in	Registry
Initial value	10
Range	0 ~ 600

System Variable Value:

0: close auto save
>0: specify a none zero integer as time interval to save drawings automatically
Once modified a drawing, the SAVETIME starts to time.
After manually executed QSAVE, SAVE or SAVEAS commands, the timer will be reset and start to time. The store path for current drawing is determined by SAVEFILEPATH system variable. The file name is stored by SAVEFILE system variable.
