To Change an Object's Plot Style

[GstarCAD 2027](#) · [Command Reference](#)

To Change an Object's Plot Style

You can change an object's plot style only if the drawing uses named plot style mode. If the drawing uses color-dependent plot style mode, change the object's color to alter its plotted appearance.

1. Select objects whose plot style you want to change.
2. Click Tools > Palettes > Properties on the main menu or you can enter the PROPERTIES command at the command line.
3. In the Properties palette, select a plot style from the list of available plot styles. Click the column next to Plot Style.
4. To select a plot style from a different plot style mode, select More. In the Current Plot Style dialog box, you can attach a different plot style table to the current layout and select a plot style from that plot style table.
5. To edit the current plot style table, click Editor.
6. Click OK.
