To Work With Regions

[GstarCAD 2027](#) · [Command Reference](#)

To Define Regions

1. Click Draw > Region on the main menu.
2. Select the object and press Enter. These objects must each form an enclosed area, such as a circle or a closed polyline.
3. A message at the command prompt indicates how many loops are extracted and how many regions are created.

To Define Regions with Boundaries

1. Click Draw > Boundary on the main menu.
2. The Boundary Creation dialog box is displayed, in the Object Type list, select Region.
3. Click Pick Points.
4. Specify a point in your drawing inside each closed area that you want to define as a region and press Enter.
