

VIEWMODE System Variable — GstarCAD 2027

VIEWMODE System Variable

[GstarCAD 2027](#) · [Command Reference](#)

Function Description:

The VIEWMODE system variable is used to store view settings of current viewport.
(Read-Only)

Type	Integer
Saved in	Drawing
Initial value	0
Range	0,1,2,4,8,16

System Variable Value:

- 0:** turn off
- 1:** perspective view active
- 2:** turn clipping front on
- 4:** turn clipping back on
- 8:** turn on UCS follow mode
- 16:** front clipping is not at eye. If this system variable is on, the front clip distance (FRONTZ) determines the front clipping plane. If this system variable is off, FRONTZ is ignored, and the front clipping plane is set to pass through the camera point (vectors behind the camera are not displayed). This flag is ignored if the front-clipping bit (2) is off.
