WMFFOREGND System Variable

[GstarCAD 2027](#) · [Command Reference](#)

Function Description:

The WMFFOREGND system variable is used to specify the foreground color when inserting an object as WMF format.

Type	Integer
Saved in	Not saved
Initial value	off

Users can use one of the following way to insert objects:
Export WMF file by WMFOUT command

Copy to clipboard and paste as WMF files

Drag as WMF files

The WMFFOREGND will be applied when WMFBKGND system variable is turned off.

System Variable Value:

Off: if necessary, exchange foreground color and background color to make sure that the foreground is darker than background color

On: if necessary, exchange foreground color and background color to make sure that the foreground is brighter than background color
