DIMBREAK Command

[GstarCAD 2026](#) · [Command Reference](#)

Commands > D Command > DIMBREAK

Function Description:

This command is used to break or restore dimension and extension lines where they cross other objects. Dimension breaks can be added to linear, angular and ordinate dimensions, among others.

Command Access:

Menu: Dimension > Dimension Break

Ribbon: Annotation > Dimension > Dimbreak

Toolbar:

Dimension > Dimension Break

Command: DIMBREAK

Alias: /

Command Prompts:

Select dimension to
add/remove break or [Multiple]:

Select Dimension

Specifies a dimension or multileader object.

Select Object

Specifies an object that intersects the dimension or leader object. The result makes space on either side of the intersecting object. Any dimension break created using this option is updated automatically when the dimension or an intersecting object is modified.

Multiple

Specifies multiple dimensions to add breaks to or remove breaks from.

Auto

Automatically places dimension breaks at all the intersection points of the objects that intersect the selected dimension. Any dimension break created using this option is updated automatically when the dimension or an intersecting object is modified.

Remove

Removes all dimension breaks from the selected dimensions.

Manual

Places a dimension break manually. Specifies two points on the dimension, extension or leader line for the location of the break.
