Drawing Properties Dialog Box

[GstarCAD 2026](#) · [Command Reference](#)

Commands > D Command > DWGUNITs > Drawing Properties Dialog Box

Function Description:

Custom properties can help you identify your drawing. You can include any of the drawing properties as a field in a multiple text (MTEXT) object. These and other properties are listed in the Field dialog box, which is accessible from the FIELD command.

The properties and settings are available on the following tabs.

Dialog Box Options:

General tab

Displays read-only information about the drawing file, which is derived from the operating system.

Summary tab

Adds keywords to all your drawing files and then uses Design Center to search for all drawing files with a particular keyword.

Statistics tab

These file properties can help you search for drawings created or modified during a specific period.

Custom tab

Creates a custom property called Project and assigns the actual project name as the value. To assign the same custom properties to a group of drawings, creates the custom properties in a drawing template file.
