## Find and Replace Dialog Box

[GstarCAD 2026](#) · [Command Reference](#)

Commands > F Command > FIND > Find and Replace Dialog Box

### Function Description:

Finds the specified text. Users can replace certain text according to needs.

## **Dialog Box Options:**

### **Find What**

Specifies the text string you want to find.

### **Replace With**

Specifies the text string you want to use to replace the found text.

### **Find Where**

Specifies whether to search the entire drawing, the current space/layout or the current selection set. The Selected objects is the default value if an object is already selected. Otherwise the Entire drawing is the default value. If you click the Select Objects button, the dialog box is closed temporarily and you can create or modify the selection set.

### **List Results**

Lists results in a table displaying the location, object type and text. Double-click one of the results to zoom to that object.

### **Zoom to Highlighted Result button**

Zooms to the selected object in the list. You can also zoom to a result when you double-click the selected object.

## Create Selection Set (Highlighted) button

Creates a selection set from the objects that contain the text highlighted on the list of results. The selected objects must all be located either in model space or in a single layout.

## Create Selection Set (All) button

Creates a selection set from all the objects that contain the text on the list of results. The objects must all be located either in model space or in a single layout.

## Replace

Replaces the found text with the text that you enter in the Replace with.

## Replace All

Finds all instances of the text that you enter in Find What and replaces it with the text in Replace With.

## Find

Finds the text that you enter in Find What.

## Search Options

Defines the type of objects and words to be found.

## Text Types

Specifies the type of text objects you want to include in the search. By default, all options are selected.

## Other versions with matching text
